-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Okazaki et al. (U.S. 5,469,196) in view of Causley et al. (U.S. 4,551,734)

Okazaki discloses:

An information transmission method that transmits information, said information transmission method comprising the steps of:

receiving an external specification of a detection condition for a sensor (fig. 4, element 16), which is not mounted on said cartridge, from outside of said cartridge (column 3, lines 31-51, the sensor counts the number of firing signals produced and is not mounted on the cartridge).

Okazaki does not teach outputting to the outside of said cartridge a signal generated by a sensor substitute module, which is mounted on said cartridge as a substitute for the sensor, according to an externally specified detection condition.

Art Unit: 2853

Causley et al. teaches outputting to the outside of a cartridge a signal generated by a sensor mounted on the cartridge, according to an externally specified detection condition (abstract, the combination teaches the sensor substitute module, since the sensor of reference B located in the cartridge is a substitute for the drop count sensor of reference A which is not located on the cartridge).

It would have been obvious to one having ordinary skill in the art at the time of the invention to substitute the sensor of Causley et al. in the cartridge for the sensor of Okazaki et al. for the purpose of providing a more accurate detection of ink level (column 3, lines 9-16).

Allowable Subject Matter

3. Claims 1-15 are allowed.

Art Unit: 2853
